The Lawson
BLAZER

Blaze Your Own Path

The Lawson Blazer is one of the most sophisticated conveyor dryers in the industry. Featuring a fully digital control center and the ability to grow with you, the Blazer is a perfect fit. The Blazer's control panel provides instant diagnostics on temperature, belt speed and electrical usage. This allows you to have ultimate flexibility and precise control over garment curing and the energy bill.

In addition to impressive digital feedback, the Blazer grows with your shop. The heat chamber and belt length can be expanded at any time to increase production when you need it.

Ideal for maximum production in small spaces. The Blazer is designed for energy-efficiency, digital consistency and ultimate flexibility.

The Lawson Blazer allows you complete customization from a variety of belt sizes and heat modules:

- I.R. with Jet-Air (most popular module)
- Quartz with Jet-Air (includes an energy saving photo sensor for instant on/off – a great production booster)
- Gas I.R. with Jet-Air (ideal for those with limited power availability and who want a small gas I.R. dryer)
- Jet-Air Cooling Modules
- Split Belt Designs (2 or 3 belt designs available)

Select a belt width and length of the conveyor belt, or create a custom width and length that fits your specific needs.
Standard Belt Widths: 24", 36", 48", 60" | **Standard Belt Lengths:** 8', 12', 16', 19'
